Abstract of **JP2000222324**

PROBLEM TO BE SOLVED: To eliminate the need for a dedicated browser by displaying a control panel for customizing operation by a program and customizing a web page through user's customizing operation using the control panel. SOLUTION: A desired page to be customized is requested from a user computer through a proxy server (1), which embeds a program for requested page customization (6), so that a browser on a computer displays the page wherein the program is embedded. The program displays the control panel for customizing operation and through user's customizing operation using the control panel, the page is customized. Consequently, the user can freely add and erase objects on an existent web page and the need for a dedicated browser is eliminated.
